

OdorCan™ Eliminates—Not Masks— Odors In Confined Spaces

Easily remove odors from the smallest, most enclosed spaces with OdorCan Vapor Phase Odor Control. This innovative, off-the-shelf product contains Ecosorb® odor neutralizer which eliminates odor by neutralizing it, rather than simply covering it up with a stronger scent.

OdorCan Vapor Phase Odor Control is ideal in many commercial settings, including restaurant kitchen exhausts, locker rooms and air conditioning systems, to only name a few. Industrial and municipal applications include lift stations, headworks and other small spaces which require simple, effective odor control.

Indoor and outdoor installation involves connecting a hose at two points and plugging the unit into an electrical outlet. The OdorCan units are easy to maintain with infrequent cleaning and refilling needed. This economical solution is lightweight, compact, corrosion-resistant and durable.

ECOSORB is non-toxic and biodegradable. It has been proven safe and effective in even the most confined spaces. ECOSORB has been tested according to United States EPA guidelines and authorized for use by the USDA.

OMI Industries is a privately-held corporation founded in 1989 comprised of industrial, commercial, and consumer divisions. Its international corporate headquarters are in the greater Chicagoland-area at 18-6 E. Dundee Road, Suite 101 in Barrington, Ill., 60010.
